

What Others Are Saying

“Sue and I like to invest in excellence. This project, and its vision for a new era in fighting cancer, again shows Nebraskans what a treasure they have in our Med Center.”

— **Walter Scott Jr., chairman of the Board of Level 3 Communications and chairman emeritus of Peter Kiewit Sons’, Inc.**

“This is a collaborative effort to bring a sizable amount of economic development to our community and state.”

— **Mike Yanney, Omaha philanthropist and co-chair, UNMC committee, University of Nebraska Foundation campaign**

“It’s amazing when you think about the ripple effect this gift – and this project – will have on our city. Above all, the Fred & Pamela Buffett Cancer Center will provide supreme care for individual patients, but it also will care for the „health“ of our community by enhancing our image, bringing new jobs and attracting premier talent in the field of cancer treatment and research.”

— **David Brown, president and CEO, Greater Omaha Chamber of Commerce**

“The Fred & Pamela Buffett Cancer Center will elevate the superior care that's right here in our backyard. And it's going to impact all Nebraskans, not just the ones with cancer. From a patient's point-of-view, going from one clinic to the next to the next can be very trying. The whole idea of having physicians, scientists, clinics and treatment facilities in one place is going to be so much more convenient for patients, for loved ones, for family members. And to have that here in Nebraska is absolutely unbelievable.”

— **Chris Pilcher-Huerter of Omaha, a two-time Hodgkin lymphoma survivor**

“Historically, the majority of advances for cancer diagnosis and therapy have come through the approaches taken by the NCI-designated cancer centers. The Fred & Pamela Buffett Cancer Center will provide the most needed comprehensive cancer services and resources to not only the Omaha area, but also to the entire state of Nebraska as well as to nearby states which lack an NCI-designated comprehensive cancer program. Thanks to our longstanding connection and research infrastructure ties with the Eppley Cancer Institute and the University of Nebraska, Saint Francis Cancer Treatment Center has been a national player in cancer care delivery, clinical trials and research. This project will be a great asset and resource for our cancer program, enabling our patients to take advantage of breakthrough discoveries without leaving their home.”

— **M. Sitki Copur, M.D., medical director of oncology, Saint Francis Cancer Treatment Center, Grand Island**
